Magnetic Snaps

Tools/Supplies Needed:

- Scissors
- Pencil
- Exacto Knife

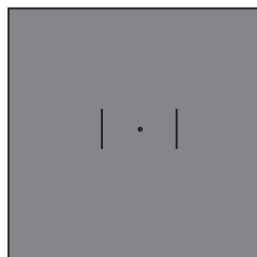

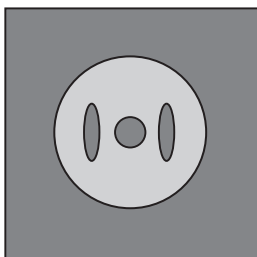

Instructions:

1. Measure the spot where the pattern says to place the snap. Mark a dot in the center on the wrong side of the fabric.

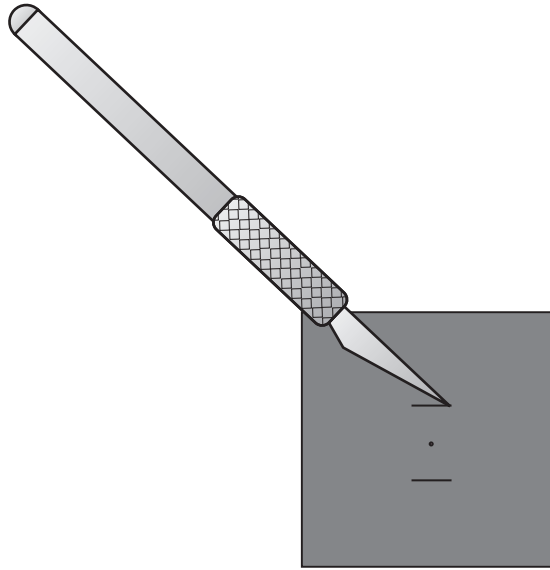

Note: If using a thin fabric, it needs to be reinforced with a small piece of interfacing or piece of cardboard.

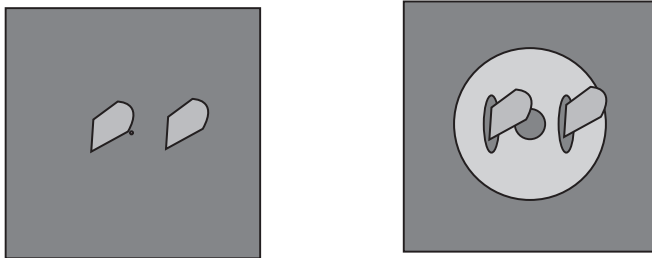

2. Take the washer from the magnetic snap and place the center hole on the dot. Then make 2 marks in the slits on the sides of the washer. This is where the holes will need to be cut.

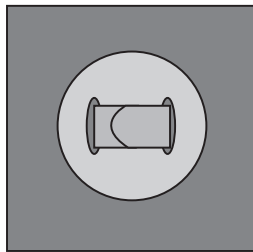

3. Slit the holes open with a seam ripper or exacto knife.

4. Place the prongs through the slits. Place the washer over the prongs.

5. Bend the prongs toward the middle of the magnet using something firm, such as a philips head screwdriver or the edge of a pair of scissors.

6. Repeat with the opposite side of the magnetic snap.
